

WHY CLAUDE CODE MATTERS

You can now build an entire software company just by talking.

Every idea that was ever dismissed because "you'd need a developer for that" — that excuse is over. Building software used to require money, technical co-founders, or years of learning to code. None of that is true anymore. The only thing standing between you and a real, working product is the conversation you're willing to have.

YOU TYPE

"Build me an app where you snap a photo of a thrift store find and it identifies the brand, estimates the resale value, and suggests three ways to style it."

CLAUDE CODE

Builds the photo upload, wires up the AI analysis, generates the styling suggestions, deploys it as an app anyone can open on their phone.

YOU HAVE

A working app that makes thrift shopping feel like having a personal stylist in your pocket. It didn't exist an hour ago.

FOR CREATIVE WORK

Interactive tools for your audience

Custom quizzes, assessments, calculators, or recommendation engines built around your exact niche — the kind of lead magnet a developer would charge thousands to build.

Client-facing deliverables

Custom tools, micro-apps, and interactive reports built to your client's exact spec — no off-the-shelf template required.

Gifts and experiences

Personalized tools built for specific people — styled their way, with their name on it. Today you'll build one for the woman next to you.

✂ FOR AUTOMATING WORKFLOWS

Live dashboards and trackers

Pull data from your tools, format it the way you want, and keep it updated automatically — no manual copy-paste ever again.

Email and outreach automations

Personalized follow-ups, reminder sequences, and applicant pipelines that run without you touching them.

Research and competitive reports

Set up a script that monitors competitors, pulls together market data, and delivers a formatted summary to your inbox on a schedule.

AI agents

Specialists that run tasks in the background while you focus elsewhere

Automations

Workflows that run on a schedule, no clicks required

Custom software

Full apps and tools built for your exact needs — not a generic SaaS that almost fits

CLAUDE CHAT VS. COWORK VS. CLAUDE CODE — WHICH ONE DO YOU USE?

Claude Chat

USE IT WHEN

- You need to think something through
- You're writing, researching, or brainstorming
- You want a quick answer or summary
- You're not building anything yet

Nothing is saved to your computer. Great for conversation. Not for creating files or running code.

Similar to: **ChatGPT, Gemini**

Cowork

USE IT WHEN

- You want to work with files on your computer
- You're creating documents, PDFs, or spreadsheets
- You want Claude to read and edit your existing files
- You don't want to use a terminal

Works directly with files on your computer. No terminal required — just point it at a folder and start talking.

Similar to: **Notion AI + Google Drive + a document editor** — stitched together in one place, connected to your actual files

⚡ Claude Code

USE IT WHEN

- You want to build and deploy something real
- You're automating a workflow end-to-end
- You need Claude to run commands, push to GitHub, or spin up a server
- You want to build apps, tools, or scripts

The most powerful mode. Runs in the terminal, works inside your project folder, and can do anything a developer can do.

Similar to: **a self-writing software factory** — like having Cursor, GitHub, and a senior engineer rolled into one, except it speaks plain English and ships the whole product, not just snippets
